# Formal Languages and Automata Theory

1. Create a grammar to generate the following languages:

- a) { a, aa, aaa }
- b) { a, aa, aaa, aaaa, aaaaa, ... }
- c) {  $\lambda$ , a, aa, aaa }
- d) {  $\lambda$ , a, aa, aaa, aaaa, aaaaa, ... }

The notation used to denote each one of the languages is:

- a) {  $a^n \mid n \in [1, 3]$  }
- b) {  $a^n \mid n > 0$  }
- c) {  $a^n \mid n \in [0, 3]$  }
- d) {  $a^n \mid n \geq 0$  }

Solution:

- a)  $G = (\{a\}, \{S\}, S, P)$  where:  
 $P = \{S ::= a \mid aa \mid aaa\}$
  
- b)  $G = (\{a\}, \{S, A\}, S, P)$  where:  
 $P = \{S ::= A$   
 $A ::= a \mid aA\}$
  
- c)  $G = (\{a\}, \{S\}, S, P)$  where:  
 $P = \{S ::= \lambda \mid a \mid aa \mid aaa\}$
  
- d)  $G = (\{a\}, \{S, A\}, S, P)$  where:  
 $P = \{S ::= \lambda \mid A$   
 $A ::= a \mid aA\}$
