

## SOLUTIONS

Increases performance and reduces system reliability.

-----

Provides hardware support to the OS memory management

-----

A small piece of code that indicates how to allocate the appropriate memory resident library routine

-----

In segmentation we might have external fragmentation while in paging internal fragmentation

-----

1.

-----

Generates a lot of disk fragmentation

-----

All of the above

-----

The thread may be cancelled at an inopportune time (like when updating its data)

-----

It can

-----

A and B are correct

-----

Always

-----

To improve performance by sending some processes to swap area

-----
